AI Use Disclosure

I used ChatGPT (GPT-6) as an AI assistance tool for my IT0043L Module 4 Technical Assessment 3: AI Responsive Layout Evaluation. I used it to generate possible visual defect reports for my personal portfolio website at viewport widths of 320px, 768px, and 1440px. I tested these reports using Chrome DevTools and recorded my actual observations. I also used ChatGPT to help improve my CSS after identifying readability and spacing issues in the feature cards. I reviewed the revised website at all three viewport widths to check that the layout looked correct. The AI-generated suggestions were treated as hypotheses and were checked against my own browser observations.

I can explain every line of this submission without assistance.
